Big Data: A Very Short Introduction

Dawn E. Holmes

2017, Oxford University Press, 125 pp.

£7.99 paperback

ISBN: 9780198779575

<https://global.oup.com/>

Biogeography relies increasingly on big data and this short introduction outlines why it is special, how it is stored and concepts for its analysis, including (for better or worse) data mining techniques. Whilst the book contains examples of big data applications, it does not include any from ecology and focuses on exploratory, rather than hypothesis driven, analyses. Nonetheless, this book offers a useful background for those new to the vagaries of big data and would make a nice addition to the shelves of any data-heavy biogeography lab.
